Dear Patient,

Thank you for trusting Matossian Eye Associates (MEA) for your eye care. We look forward to seeing you at your appointment in our office soon.

During your visit, we will conduct a thorough eye exam. We will examine the overall health of your eyes and your ability to see up close and at a distance. Two of the most common issues that affect the vision of people over 60 are cataracts and a condition called presbyopia. Cataracts cause your vision to become blurry over time. Presbyopia causes most adults over 40 to need reading glasses or bifocals to see up close. We will check for both during your exam.

If, during your exam, we determine that you have a cataract, we will discuss all of your treatment options with you based on your lifestyle and eye health. Fortunately, there are multiple options to restore your cloudy vision due to cataracts. One technology provides you with the ability to see near (reading), intermediate (computer or cooking) and far (driving) distances with less dependence on glasses. Another technology provides us with the ability to decrease astigmatism (irregular shape of front surface of the eye) to make you less dependent on glasses. For additional information, please visit our website at www.Matossianeye.com.

Please complete the various forms in this packet and bring them with you at the time of your visit. This will allow us to give you the most personalized attention possible. If you have any questions, please call us at **800-708-8800**.

Looking forward to seeing you soon,

Cheryl Price
